

Visit [PrivacyRights.org](https://www.privacyrights.org) to see the types of publicly available information about data breaches. How might researchers use this information to study breaches? Enter a paragraph in your journal.

Researchers will study data breaches from websites like [PrivacyRights.org](https://www.privacyrights.org) to analyze trends, causes, and impacts of breaches. Websites like [PrivacyRights.org](https://www.privacyrights.org) will provide details about the type of breach. For example hacking, insider threats or like physical theft of data and the type of organization that was actually affected. By examining details of the data breach, the researcher can identify patterns to which sectors are most vulnerable, what is the most common method of breaches, and how organizations can respond to the breach and be regulated to avoid these attacks and data breaches. This helps guide policies that will strengthen data protection.
