Assignment 4

Question 1: What do these polygons represent? (Hint: Use the ArcGIS Pro Help Documentation as reference if needed.)

These polygons represent buffer area around the recreation facilities. This area is going towards the facility and is calculated based on different lengths of measurements.

Question 2: Use at least three sentences to summarize what you have learned from Assignment 5.

From this assignment there were many methods used to reach the result. One main method learned from this assignment was performing network analysis to find different service areas corresponding to a park or rec center. Another method I learned was using arc catalog to perform an analysis on the streets to create a net data layer for ArcGIS.

Service Area of Recreational Centers and Parks in Norfolk, VA
