The Ecological Importance of Deep-Sea Jellyfish

Question:

What role do deep-sea jellyfish play in the marine food web, and how do they affect nutrient cycling in their ecosystems?

My proposed review paper topic will be on deep-sea jellyfish, specifically the role they play in the marine food web, and how they affect nutrient cycling in their ecosystems. Much is to be researched on deep-sea communities. The marine food web and nutrient cycling are a major factor in the stability of an ecosystem. It is important to research these communities and how they interact to have a better understanding of how marine life thrives in deep-sea environments.
