### Journal Entry 15

Davin Teo's TEDx talk on digital forensics, and it made me reflect on the connection between digital forensics and social sciences. Teo's journey from law enforcement to digital forensics shows how the field requires more than just technical skills—it also involves understanding human behavior. Investigators must interpret digital footprints, which is closely tied to psychology, sociology, and criminology. Digital forensics isn't just about uncovering data but understanding the societal and psychological contexts behind crimes. Teo's career highlights how crucial social science principles, like ethics and human behavior, are for investigators in solving crimes. It reinforced my belief that digital forensics is deeply intertwined with the social sciences.
