

The article informed me that cybersecurity is becoming a more modernized warfare field than traditional warfare. The fact that this problem impacts everyone, not just the military, caught my attention. Misinformation is spreading more easily than ever thanks to social media, and it's becoming harder to tell what is real and what isn't. Although the paper emphasizes the necessity for military commanders to understand these concerns, I believe that the general public also needs to be more conscious. It caused me to reflect on how readily we are swayed by the information we encounter and how important it is to challenge sources. These days, cybersecurity is about safeguarding brains as much as data.
