Week 3 – Journal Entry

PrivacyRights.org can be used to analyze trends, causes, and impacts of all sorts of breaches; which is all crucial information for researchers to have access to in order to study the history of breaches. By examining the types of data compromised, researchers can find patterns in vulnerabilities and take note of the methods uses by attackers. This data can also help researches see if the tools they're putting into places to mitigate security risks are actually working. In general, recording history if very important so we can learn from it, and it's no different in the world of cybersecurity
