### Week 8 - Journal Entry

As we know, movies and shows often don't often depict reality, and this is no different when it comes to Cybersecurity being portrayed in film. In this video, Keren Elazari, a security analyst, took a look at a variety of different clips from shows and movies, and then ranked how accurate they depict the real world. What we can see is that Hollywood tends to bring a lot more "excitement" into hacking than we often actually see in the real world. In actuality, a hacker sits around either alone or with a team of others, and tries to find vulnerabilities within systems which can be a very tedious and long process. If this process was accurately shown, it could be seen as quite boring for the viewer, especially if they don't know much about cybersecurity. There are pieces of media that reached a good balance, like Mr Robot, which accurately depicts how events such as CTF's actually operate, while also twisting some things to provide more entertainment.
