

## Classroom Observation Log

School: Alexandria City High School.

CTE Course: SEPS 297: Observation & Practicum Fall 2024

Clinical Faculty:

Date: 10/22/2024

Time: 8:15 am. to 1:20 pm.

**Classroom Observations: 9th and 10th**

After I delivered my lesson plan last week and the students became familiar with the materials that they need for this project and 3D printer software work, students started designing their project. Today, Mr. Hammons started the class with an open conversation and asked the students if they were facing any challenges doing their project. Also, he asked them if they had any questions about their designs.

**Student's reaction to the lesson:**

Most of the students became more engaged in this lesson. They became more interested in making their designs unique. On the other hand, a few students needed some help because it was the first for them to use a 3D printer. I helped some students to finalize their designs and answered their questions.

**Best practices observed:**

The best practice that I observed was when the teacher, Mr. Hammons, started his class with an open conversation. I noticed that many students were waiting for this moment to ask questions. I think it is a good way to help students get the right answers and save time to focus on the necessary steps.

**Take Aways:**

Students should walk out of this classroom with their final designs and ready to start their projects.
