### “B.S. AI for Cybersecurity”

I would like to pursue a bachelors degree in AI for cybersecurity because I believe that it would benefit me the most out of any allied majors and minors with cybersecurity. A degree in AI for cybersecurity would open up a lot of windows of opportunities for me to excel in a career. For example, a bachelors degree in AI would equip me with a high-demand, specialized skill set for a field with excellent job security, diverse career paths, and competitive salaries. Also, it will prepare me to design and implement advanced, AI-enabled solutions to address complex, evolving cyber threats. However, there would be some major key challenges in getting such a degree such as the need for complex interdisciplinary skills, the dynamic and rapidly changing threat landscape, and the difficulty of getting practical and hands-on experience.
