Journal Entry 13

In our society, it seems that problems and solutions are found from trial and error and vulnerabilities. This study brings up a point that is important to note and its how companies are able to resolve problems. This article touches on the term “bug bounties” which is defined as a being who finds and discovers vulnerabilities in systems and reports findings to administrators for profit and better security measures. This study shows bug bounties and how useful they are in cybersecurity and how it adds to preventative measures. In conclusion, bug bounties are very useful and has proved its success by showing vulnerabilities at a successful rate.
