

Robel Degefa
Journal Entry 3

Data breaches are extremely broad in terms of cybersecurity and the research that people have conducted among the many breaches that our technology has seen is very useful to prevent it from happening in the future. Many ways we have seen this be used is how companies use the research conducted to create software updates to add more encryption. Another way we have seen this be used. Another way researchers use this information is to create statistics to show what areas are more encrypted than others so consumers know where they can ensure their data can be safe. Overall, the information conducted by researchers is very important to the world of technology to prevent data breaches and ensure our information is kept safe.
