

Satake, N. et al. Chromosome abnormalities and MLL rearrangements in acute myeloid leukemia of infants. *Nature*. <https://doi.org/10.1038/sj.leu.2401439> (1999).

The previously cited article is a primary article in the peer-reviewed journal *Nature*. The article is classified as a primary article because it records the original researchers' data and findings. It also includes key sections commonly found in a primary article. First, the introduction includes explains their parameter of interest. Following that, there is a section on how their clinical trials were performed and then a section stating the results of their data. Finally, the researchers discuss their findings and potential next steps for research in the last section before their references.
