

# THE SOCIAL IMPACT OF CYBERCRIME

RUSLAN RUSTAMOV

# WHAT IS CYBERCRIME

---

Cybercrime is any crime that involves computers or the internet

Examples include hacking, identity theft, online scams, and phishing

Cybercrime affects millions of people every year

It is growing because more daily activities happen online

## IMPACT ON VICTIMS

---

Millions of people become victims of cybercrime every year

Victims can lose money and personal information

Many people experience stress, fear, and anxiety after being hacked

Identity theft can damage credit and reputation

Some victims become afraid to use the internet

Personal information can be sold on the dark web

# SOCIAL IMPACT ON SOCIETY

---

Cybercrime hurts businesses and the economy

It reduces trust in online shopping and digital services

Schools, hospitals, and governments can be targeted

Communities can feel less safe in the digital world

# PREVENTION & CONCLUSION

---

Use strong passwords and two factor authentication

Do not click on suspicious links or messages

Keep software and devices updated

Cybercrime has serious social effects, but education and awareness can reduce the risks

Try to learn more information how to protect your device

# THANK YOU
