

```
Terminal - student@kali.example.com: ~
File Edit View Terminal Tabs Help
(student@kali.example.com)-[~]
$ echo "samuel_ayala"
samuel_ayala

(student@kali.example.com)-[~]
$ date
Mon Sep  1 21:08:33 UTC 2025

(student@kali.example.com)-[~]
$ ls
Desktop Documents Downloads Music Pictures Public Templates Videos

(student@kali.example.com)-[~]
$ pwd
/home/student

(student@kali.example.com)-[~]
$
```

- The command “echo” just displays what the text after it, in this case my name, once you hit enter.
- The command “date” displays the exact date that it was prompted on. In the case of my machine, it displayed Mon Sep 1 21:08:33 UTC 2025
- The command “ls” is used to display the names of files and subdirectories in the system and for my case it displayed Desktop Documents Downloads Music etc etc
- The command “pwd” displays the path for the current directory. Since I’m not currently running anything or in anything other than the command lines, all it displays is /home/student (since I’m in the cyberrange)
