Professor Kole

Reading Response 1

16 January 2022

The first article that I read was the article about email etiquette. Overall this article just broke down the ways to write a good and effective email to your college professors. Some of these tips include adding your class period and time to your class in order to make it easier for your professor to find you. As well to add the thing that you are emailing them for in the subject just make it clear. Also explains how there should be a specific way to write our emails. Since growing up in this texting age we have to make sure that we don't add those same texting methods in our emails. Also, suggest that we should try to write in a positive tone and try not to use words like non or ex. As well as to try to keep the email brief and to always check for punctuation and grammar mistakes before sending it.

The second article that I read was the Shitty First Drafts article. This article begins with a draft of a paragraph on which is the article is based. It then explains how most people believe the idea that all writers have an easy time writing their stories. However, this fantasy that all readers create their stories first try is far from the truth. The article explains how many writers usually do not even have a plan before they start writings. They come up with their ideas as they write. This is where the "shitty first draft" is explained to be the first draft that you just lay all your ideas out and do not care about the overall structure of it.

Overall I enjoyed the two articles that I choose and believe that they are helpful. I believe that email etiquette is the most important one to learn and know. The reason for that is that you want to seem mature in emails to your professors and show that you are serious. Also, those tips

that they proved us can help me outside of college and for the rest of my life. Also, believe that the second article was informative because I can use that tactic if I'm having trouble starting an essay or assignment.
