How did you score?

What do you think about the items in the scale?

Why do you think that different patterns are found across the world?

The article on social cybersecurity from Military Review highlights the increasing overlap between cyber threats and social dynamics. It states that cybersecurity is not just a technological issue: it also involves the understanding of humans. This includes how groups and individuals are manipulated through social engineering and false information. This article emphasizes how vulnerable people are to cyber-attacks. These cyber-attacks can influence their beliefs and behaviors. The author of the article suggests that the military and government should focus on social awareness instead of technical defenses. Focusing on social awareness allows the military and government to defend against the advancement of these cyber threats within cybersecurity.
