Packet Tracer 6.1

The screenshot displays the Cisco Packet Tracer 6.1 interface. In the top-left corner, a network diagram shows two PCs (PC0 and PC1) connected to a central Switch. The main workspace is currently empty. A configuration window for PC0 is open, showing the 'Desktop' tab. The 'IP Configuration' section is active, with the 'Static' radio button selected. The 'IPv4 Address' field contains '192.168.100.63' and the 'Subnet Mask' field contains '255.255.255.224'. An error dialog box is overlaid on the configuration window, displaying a red 'X' icon and the text 'Error: Invalid IP for this subnet mask entered'. Below the error message is an 'OK' button. The bottom of the interface shows a toolbar with various icons, a 'Time: 00:04:20' indicator, and a 'Realtime' simulation mode button.
