LCDR Green - In class exercise

BLUF

BLUF: Today for our class, Lieutenant Commander (LCDR) Terrance O. Green an Information Warfare Training Command located here in Virginia at Virginia Beach.

Policy Deviance

During LCDR Greens' talk to the class today we were informed about the policy deviance that is displayed everyday at his chain. He went further on to talk about where the deviance comes down to which he said it comes down to immaturity of the people and/or not being knowledgeable on proper etiquette of cyber and cybersecurity. We were told about how many of the people who come in and serve under LCDR Greens' command are fresh out of high school with little to no experience in the cyber and cybersecurity world. I found this piece of information interesting and had me drawn to it as policy deviance is a major security threat and we have been talking about threats all year long as it is such an important thing.

Meteorology x Cybersecurity

I found LCDR Green speaking on this very fascinating as I haven't thought about these two worlds being combined before but the more I thought about it I started to see ways they would be connected. One thing that LCDR Green talked about that connected them was data so I would like to connect that to the aspect of data integrity, as integrity of data is very important as

if the data is altered it could lead to incorrect forecasts, missed severe weather warnings, and evacuations that are unnecessary. Missed severe weather warnings could lead to many issues for the cyber security aspects of things, such as: data centers being destroyed, communication lines being shut or knocked down, leading to us being forced onto vulnerable back up networks.

Skills

We asked LCDR Green to inform us of what skills are a necessity in his field of work if we would want to do something related to what he does and we were informed of things that we are drilled to remember. He told us that communication is the key to everything.

Communication is the branch off into everything that will make us successful not only in his job, but any job in the cyber field. He brought up leadership being a key thing that is needed, but you can't be a leader if you are unable to communicate your thoughts or command your subordinates to do something. He brought up something which I found interesting as a skill, being the skill of curiosity. We were informed that any good member of the cyber field he met all had a huge curiosity to figure out more and try new things which made them successful.

Conclusion

To conclude, I'd like to say that LCDR Greens' talk informed us of many things we have been learning about, such as: security threats, integrity of data, and communication. His talk today drilled into me that the further we got into this or any cyber related field that these things we learn in class will be something we will know and have to deal with for the rest of our careers.
