

Work Place Deviance Discussion

The word deviance can be defined as “the fact or state of departing from usual or accepted standards, especially in social or sexual behavior” according to the oxford language. Deviance in the workplace can happen very easy in the cyber tech field, this type of deviance happens more on the web than face to face which really makes it hard to find. One example of deviance in the workplace would be someone who was recently fired for something, and they decide to lash out on the company for what happened to them. In the cyber technology field this the things that this employee could do something like sell the companies information on the internet for some financial gain. If the company has not acted quick enough to complete rid themselves of this employee, this employee could continue to try to harm this company. This is considered to be deviance in the workplace because it is against what the company expects of you as an employee. Another example of deviance in a cyber technology workplace is an angry employee who decides to shut down their security system, which will leave the companies defenses down and open for attack. The company would be at the mercy of any hacker trying to get their critical information. Overall cyber technology has ultimately created new opportunities for workplace deviance because these things are harder to track. Employees could potentially do more damage over longer periods of time before they get caught. Deviance in the workplace will happen all of the but is way easier to do when you can't be caught in the act.
