Starting off this article talked about social cyber security. It talked about how big tech is all around the world and cyber security is getting more popular than ever. The head of every modern country has a cyber security team. The teams try to protect their country information as information is the most valuable thing. Imagine Russia getting some of the United States information which could turn out bad which is why cyber security is mandatory. When war is going on there is not just physical fighting, there are battles going on virtually too. As a comparison to back then different strategies were drawn out on paper or a map, but nowadays it can be seen digitally. Social cyber security is more human vs human rather than the traditional way you see in cyber security. The upbringing of cyber security changed the whole way the world works. The news was the major source where everyone got their information from back then. Nowadays people get their information from social media and even though it is easily accessible the one major flaw with that is some people do not check their sources before they retract their information. Fake pages on apps like Twitter, Instagram, and Facebook confuse people all the time. You can say whatever you want on these sites without any clarifications and a lot of older people are the main people I see getting fooled by fake pages. They will see that an account is verified so they think their information is right and correct, but anyone can buy verification nowadays.
