

After watching the video, write a journal entry about how you think the media influences our understanding about cybersecurity. Has this understanding changed over time? What is the difference between older pieces of media vs more current media?

From my own perspective before I really knew what cyber security was, I always thought it was about protecting yourself from threats on the internet. Every show I watched that involved a hacker always made the hacker have a good moral reason for why they are doing what they do. I came up with this from being on different social media platforms and hearing others talk about it. The media influenced cybersecurity by making it seem not as complex as it is. I feel as the media either over does it or under rates it there is no in between. I think the understanding has changed more over time the come up of Ai made more people look into it themselves instead of getting their view of it from the media. The different movies and tv shows have some certain generalizations of what real hackers do. For example, shows put hacker's hideout somewhere discreet and out the way. When some hackers do it from the company of their own home. I think the main difference between the newer media and the older is that the newer media is more realistic on these things because as time goes along everything evolves. The newer media also have up-to-date different devices and mention the current trending programs." Increased Reliance on Digital Tools, Tapes and film have become things of the past, giving way to digital cameras and cloud storage."
