

According to (*Data Breach Chronology* | *Privacy Rights Clearinghouse*, n.d.) “We collect data from publicly available, government-maintained data sources. This includes the U.S. Department of Health and Human Services and various state Attorneys General who publish data breach notices they receive under their states’ data breach notification laws.” Researchers can utilize this publicity information in many different ways. For example, Trend Analysis: Researchers can determine trends pertaining to certain businesses, types of data exposed, and the efficacy of security measures by analyzing the frequency and types of breaches over time. By utilizing this extensive information, scholars can aid in the creation of more effective safeguards, regulations, and instructional initiatives targeted at reducing similar breaches in the future.
